

DENTAL INSTRUMENTS CATALOGUE

W **TRUEWIN**
INDUSTRIES
Manufacturers & Exporters of Dental Instruments.

We, at **TRUEWIN** would like to
THANK YOU

for taking the time to browse through our catalog.

We realize we do not quite follow the norms.

We focus on expressing our total commitment to perfection when it comes to production-be it a catalog or an instruments. We have tried to convey to you our colleagues and friends that our instruments are designed to enhance your life so that you may continue with the beauty in life that it brings.

Precision - Perfection - Persistence

TRUEWIN

Truewin Dental Instruments

Truewin feels great honor to introduce itself as a renowned manufacturing company of dental & surgical instruments. Customers concerning to this field always prefer **Truewin instruments**, which makes us satisfied to our work.

Our all instruments are manufactured by the high quality stainless steel made on customers requirements, every instrument is hand crafted with the highest workmanship available in our industry. Through heat treatment, the instruments are hardened and tempered for proper functioning and attaining long life. All instruments are polished electrolytically and manually for maximum resistance to corrosion for a long working period.

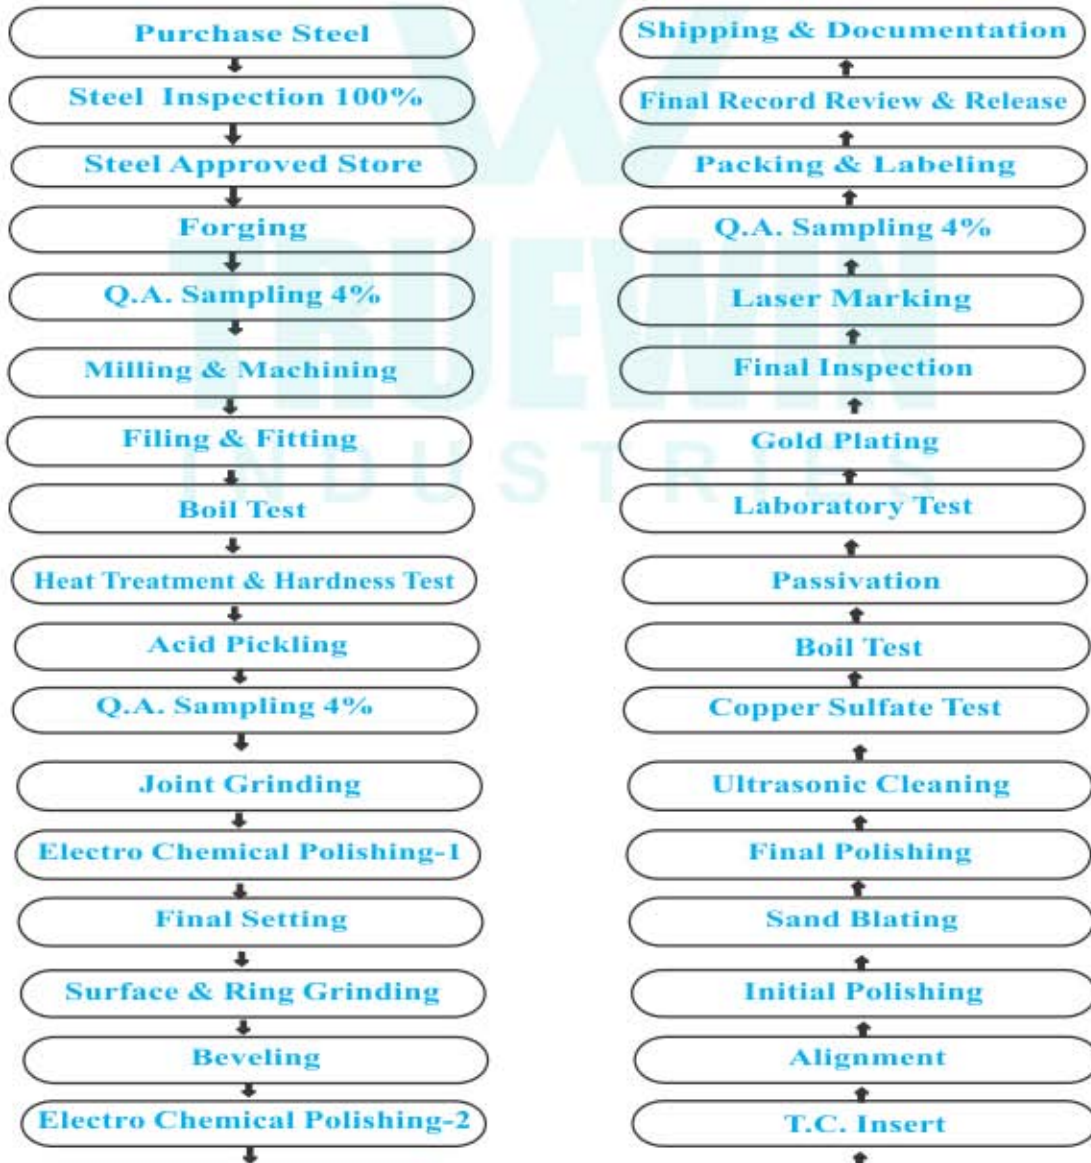

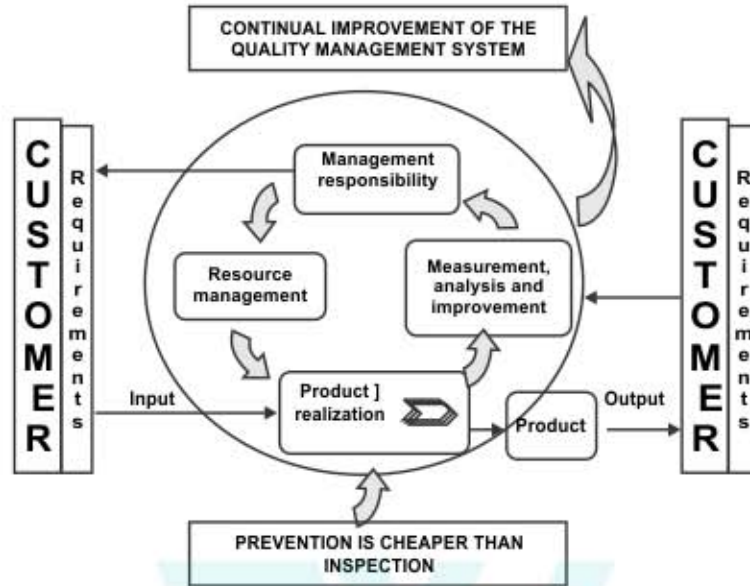

Truewin pays special attention to the needs of doctors, with innovative designs to meet the needs of professionals. The wide assortment of standard patterns and exclusive designs gives you the most desirable range of surgical and dental instruments. Truewin will continue to produce and supply its quality products of surgical and dental instruments with best assurance.

QUALITY SERVICES & SATISFACTION

- * To provide 'Excellent services and reasonable prices' is the aim of our business.
 - * All instruments are made of international grades of stainless steels and worked under technical guidance of ASTM F899/11 standard.
 - * All instruments are stamped or laser marked the description that customer demands.
 - * Special items can also be supplied if sketch, drawing or samples are provided to us or referred as guidance.
- 1- 100% Inspection on machining and grinding stage.
 - 2- 100% Inspection after polishing
 - 3- 100% Inspection at final stage
 - 4- All above doing, 100% inspection are followed by 4% Inspection by Q.A. Manager
 - 5- Boil test of 10 pcs from each production lot.
 - 6- CopperSulphate test of 10 pcs from each produced lot.
 - 7- Material analysis test of 1 pcs from each produced lot.

All above stated inspections are performed to keep the certified criteria for each product to get assured quality instruments.

Process Model

01 EXTRACTING FORCEPS 01 to 41

02 ROOT ELEVATORS 42 to 62

03 DIAGNOSTIC, PERIODONTAL & RESTORATIVE INSTRUMENTS 63 to 134

04 MAXILLOFACIAL SURGERY INSTRUMENTS 135 to 178

05 ORTHODONTIC PLIERS & INSTRUMENTS 179 to 201

06 DENTAL IMPLANT INSTRUMENTS 202 to 237

07 IMPRESSION TRAYS 238 to 255

08 HOLLOW WARE INSTRUMENTS 256 to 264

TRUEWIN
INDUSTRIES

The diagram illustrates the extraction points for various teeth in the upper and lower dental arches. The upper arch is labeled 'Up' and the lower arch 'Down', with 'Right' and 'Left' sides indicated. Extraction points are marked with colored dots and numbered boxes. The upper arch points include: 29,30,108,113; 1,29,30,113; 29,30,108,113; 1,107; 7,17,44N,51,52,53,65,89,92,94,95,96; 7,18,44N,51,52,53,65,90,93,94,95,97; 10,17,19,67,88,89,94; 10,18,19,67,88,90,95; 18; 28. The lower arch points include: 22,23,24,73,79; 22,23,24,73,79; 16,22,73,79,86,89; 13,75; 13,74,75A; 33,74,75A; 38; 37; 22,23,24,73,79; 16,22,73,79,86,89; 13,75; 13,74,75A; 43; 42; 41; 31; 32; 33. The lower arch also features two diagrams showing extraction points for specific teeth: 37,138; 39,157,128,159; 39,157,158; 160,161; 123,143; 123,162.

Four types of extraction forceps are shown below the diagrams:

- English Pattern:** A standard extraction forceps with a simple, curved beak and a textured handle.
- English Pattern, Anatomic Handle:** Similar to the English Pattern but with a more ergonomic, curved handle.
- American Pattern:** A forceps with a long, straight handle and a curved beak.
- Deep Grip Forceps With Hole Pattern:** A forceps with a long, straight handle featuring several circular holes for grip and a curved beak.

A) Extraction Forceps

Truewin Dental forceps are pliers-like instruments that are used to grasp teeth.

A dentist will usually have a number of different ones on hand, each having a design that's tailored to:

The specific shape of the tooth it's intended to remove (such as incisors vs. molars having two roots vs. molars having three roots).

The location of the tooth in the mouth (such as front vs. back, or left lower molar vs. right upper molar.)

How they're used.

A dentist will grasp a tooth with their forceps and then firmly and deliberately rock it back and forth as much as it will.

Because the bone that surrounds the tooth is compressible, the socket will gradually start to expand.

As it does, the range of the dentist's side-to-side motions will increase.

In addition to this rocking motion, the dentist will also rotate the tooth back and forth.

This twisting action helps to rip and tear the tooth away from the ligament that binds it in place.

At some point, the socket will be enlarged enough, and the ligament torn away enough, that the tooth can be easily removed.

HANDLES FOR ROOT ELEVATORS POINTS A, B, C, D

Truewin Dental Root Elevators

To look at one of these instruments you might mistake it for a narrow screwdriver.

That's because just like one an elevator has a handle and then a specially designed "blade" or tip portion.

How they're used.

The tip of an elevator is designed to be wedged into the ligament space between a tooth and its surrounding bone (as shown in our animation).

As the elevator is forced into and twisted around in this space, the tooth is rocked around and pressed against the walls of its socket.

This helps to both expand the shape of the socket and separate the tooth from its ligament.

As this work is continued, the tooth gradually becomes more and more mobile.

In some cases, the dentist may be able to completely remove the tooth just using their elevator.

If not, they will choose a point where they feel they have accomplished as much as they can with it and will then switch to using extraction forceps.

Truewin Dental Hand Instruments

The types of hand instruments can be categorized based on their function:

- Examining the mouth and teeth
- Scaling or professional cleaning of teeth
- Cutting teeth and removing cavities
- Placing and condensing filling materials
- Carving and finishing dental fillings
- Miscellaneous types
- Instruments used for examining the mouth and teeth

Mouth mirrors are used to examine the condition of the teeth and mouth, as well as to retract the tongue and cheeks upon examination.

Probes— There are many probes available but the main types are the straight probe, Briault probe and periodontal probe.

The straight probe is sharp and it is used to examine cavities in the dentine region as well as to check the margins of restorations or fillings.

The Briault probe is also sharp and it is used to detect the junction between the enamel and dentine. Briault can also be used to detect tartar hidden in the gum pockets.

A periodontal probe can be used to measure the depth of the gum pockets and for other measurements. Instruments for cutting and scraping tissues and deposits

Scalers remove tartar (calculus) on the tooth surface as well as those hidden in the gum pockets. They can also be used to remove other surface deposits and temporary crowns.

Excavators are used to remove softened dentine and temporary fillings. The back of the blade can also be used for placing linings between filling materials. Sometimes excavators can be used for carving metal or amalgam fillings.

Chisels are used to remove unsupported enamel during cavity preparation. Unsupported enamel can be harmful for it can compromise the longevity of the filling if not removed.

Hatchets and hoes have similar purposes to chisels. Instruments used for placing and condensing filling materials Plastic instruments convey and shape filling materials and are usually flat blades that do not use heavy pressure.

Some instruments have rounded ends for shaping and burnishing the surfaces of fillings. Plastic instruments are usually made of stainless steel for most materials though there are also thin Teflon-coated or titanium nitride instruments which are non-stick for composite fillings. **Condensers or pluggers** are used for compressing and forming filling materials. Heavy pressure is applied on use therefore these instruments are usually used for metal or amalgam fillings. Instruments used for carving and finishing fillings Carving and finishing instruments have sharp or semi-sharp blades of various shapes. They are used to carve materials by cutting and scraping.

VALUED BUYERS

Compare our scalers and curettes with the best in the industry and you will immediately recognize we are equal in every way but one... price. Note the deep precision knurling for better tactile feel. The same high-grade stainless steel tips, the same light weight (under 20 grams) for less hand fatigue, the same professional craftsmanship, and surpassing the highest industry standards. Of course, any manufacturer can make these claims, but we guarantee and certify ours. We regularly manufacture below articles in showing handles & pattern A,B,C,D,E,F,G,H,I & J for better grip & perfection. We are also fully equipped & capable to develop these instruments as per your own specific requirements & demands in materials, sizes, shapes and patterns.

Technical Datas:

Intercondylar distance	120 mm.
condylar inclination	fixed at 30°
Bennet angle	fixed at 7°
Incisal table inclination	10°
Distance between mounting plates	110 mm.
Weight	700 gr.
Opening	180°

features:

Lightweight anatomic articulator made of aluminum die-casting, it can be used following the geometrical laws of medium values (Bonwill triangle). Fixing according to centric. Automatic return to the hinge axis with springs. Perfect stability also in reversed position. Easy access and visibility to the lingual surfaces. Interchangeable self centring aluminum mounting plates.

TW3-667
Anvil
Dental Laboratory
Instrument

Increased height and width

- (1) More space when using removable stumps systems.
- (2) More space for installation of mobile prosthesis with high chewing or big base.
- (3) More space when using magnetic plates

TW3-666

Technical Datas:

Intercondylar distance	120 mm.
condylar inclination	fixed at 30°
Bennet angle	fixed at 7°
Incisal table inclination	flat
Distance between mounting plates	110 mm.
Weight	700 gr.
Opening	180°

Special Features:

Adjustable back by registration screw to work without incisal rod by keeping constant trajectories and inclinations during side and back/forward movements. Pure translation movement (key and instructions included). Anti-shock hinge rod in case articulator falls down. Bigger size lock screws for mounting plates.

Truewin Maxiofacial Surgery Instruments

A Bard-Parker handle with a No. 15 blade is the usual scalpel used to make incisions on the gums where a flap can be raised to gain access to tooth.

Retractors

Tongue, cheek and flap retractors are needed to provide adequate access to the tooth and are legion in number.

Needle Holders and Sutures

Sutures are used to replace and secure the gum flap in its former position, to limit the size of the wound and therefore restrict subsequent contamination with food debris, and to assist in controlling bleeding.

The usual suture size for intra-oral work is 4/0 and the material may be absorbable or non-absorbable Scissors

Dissecting scissors and suture-cutting scissors are usually used.

Artery Forceps

These are designed to hold soft tissue without damaging it.

College tweezers are used to lift up sutures prior to removing them.

Periosteal Elevators

A number are available and are similarly used like a normal elevator but periosteal elevators have two heads – one at each end.

One end is sharp-tipped to expand the tooth socket while the other has a blunt end to remove granulation tissues or raise a gum flap.

Chisels and Mallet

Chisels are more appropriate in the operating theatre and are particularly useful for disto-angular third molars and upper wisdom teeth extraction.

Bone Curettes

The Mitchells trimmer is probably the most valuable instrument in the category and is used to remove granulation tissue in the tooth socket.

Bone Ronguer and Bone File

Used to smoothen any sharp bone edges after tooth extraction is done.

Truewin orthodontics pliers in Clinical Dentistry Orthodontics and Dentofacial Orthopaedics

Driven by the demand for tooth alignment, general practitioners are increasingly being asked to provide orthodontic treatment.

Dentists keen to participate in this area of expertise need to demonstrate the skills to identify suitable patients, the ability to provide conventional and contemporary orthodontic treatment and be aware of its limitations.

This is exactly what this programme delivers, along with the vital core competencies to excel in this unique postgraduate area.

The objective of the Truewin in Orthodontics and Dentofacial Orthopaedics is to provide dental surgeons with the core knowledge and clinical skills essential for the delivery of competent, high-quality dental care.

It encompasses a blended learning approach and consists of a combination of lectures, seminars, workshops, clinical case discussions and laboratory sessions.

The flexible modular structure enables the programme to meet a wide range of student needs.

Truewin Instruments for dental implants are made of high quality stainless steel.

Our line of instruments include, but is not limited to, the following products:

Bone Grafting Instruments

- Bone Curettes (SPRATT) – designed for harvesting bone
- Bone Grinder – used in conjunction with a mallet to grind bone into appropriate particle sizes
- Bone Basin – weighted bottom design prevents tipping or spilling while mixing bone or other bone grafting materials

Bone Compactors – feature serrated tips for compacting bone

Scalpels & Biopsy Punches

- Scalpels – offers convenience of a disposable with razor sharp cutting edge for superior cutting
- Biopsy Punches – designed at a steeper angle to ensure a finely honed, sharper edge
- Bone Spreading Chisels
- Freer Chisels – double or single cut tips used for widening ridges during implant preparations

- Graduated Chisels – feature reference markings for measurement during a bone ridge augmentation and are available in straight and curved patterns

Osteotomes

- Concave Osteotomes – break the floor of the maxillary sinus through the implant cavity and are available in curved (off set) and straight (with or without stops)
- Convex Osteotomes – raise the floor of the maxillary sinus and are available in curved (off set) and straight patterns (with or without stops)
- Progressive Osteotomes – designed to prepare the implant site in the maxillary area where bone density is 3 or 4
- Bone Spreading Osteotomes – sharp or blunt configurations for progressive circumferential expansion of the implant site

Sinus Lift Instruments

- Sinus Lift Curettes and Elevators – lightweight, wide diameter stainless steel hand instruments lift the sinus membrane for bone augmentation procedures

Gauges & Calipers

- Gauges & Calipers – various measuring devices available to determine appropriate length, width, and distance for implant procedures

Collagen Products

- Collagen wound dressing product offering includes products.

Sterilization Trays

- Sterilization Trays – designed to protect and store instruments during sterilization, transportation and storage
